

Silver Dip

This product is especially formulated to clean sterling silver jewellery.

Directions: First loosen any stubborn dirt by immersing jewellery in warm water bath with dish soap. Use a soft old toothbrush if needed. Rinse. Then immerse jewellery in cleanser for ***only four seconds***. Rinse immediately under running water, then dry. If desired, follow up with your polishing cloth.

Unlike my *Gentle Jewellery Cleaning Kit*, the Silver Dip is not safe to use on all jewellery, but is exclusively used on sterling silver. Do not use on porous gemstones, delicate pearls, opals, enamels or fashion jewelry.

It is, however, an amazingly well-working silver dip - once rough debris or oils are removed, simply immerse the sterling silver piece in the basket, count one-onehundred, two-onehundred, three-onehundred, four, and out it comes. Rinse immediately under running water. Dry with soft cloth.

Please be advised that this process will also remove any patina or oxidization, which may have been applied to your piece on purpose (these are like the dark lines in recesses to highlight designs).

One last word: Such magic does not happen without chemicals, so it is recommended that you open a window (or two) while you do this. Avoid contact with all other metals, pearls, and porous stones (i.e. coral, turquoise, etc.).

There is a definite smell to this product, as well. But trust me, I have tried many many such product, and this is the best! You will love it.

Keep this and all chemicals out of the reach of children. Contains thiourea.
If taken internally, call a physician immediately.
